

PROCESSOR MODULE

By using Davitors Processor Module in your design, you may get one of the fastest way to a BACnet over IP product there is! Even without the code, the module has great things like SD flash, real-time clock, LEDs and lots of ESD protection. The code support boot load over internet, storage on SD flash or external memory. But most importantly gets you started with converting electrical signals into BACnet objects that allows for binding as configuration rather than writing code.

- BACnet support.
- BACnet implementation converts electrical features into BACnet objects.
- BAC-QL makes real-time configuration possible and Easy.
- Boot image loading and reboot over network.
- Free programmable.
- SD flash.
- Real Time clock.
- Optional memory circuit.
- Several TQFP 64 Processor options may be mounted.
- Calendar.
