

WI-FI MODULE

By using Davitors Wi-Fi Module in your design, you are not limited to the use of only Wi-Fi but can later chose to instead mount a Ethernet module or a Radio module such as for example Mi-Wi (Future product spring 2016). Davitors Wi-Fi Module is not only a great Wi-Fi module but also an option for future development. This may be the fastest way for your development to reach the market and yet you need not to redesign your, if you decide on a different communication interface in the future.

COMMUNICATION MODULE FOR WI-FI

- The footprint offers an option to mount an Ethernet module without costly redesign.
- Powered by up to 5V and regulated down to 3,3v enables a zone design that improves noise isolation and EMC tolerance.
- The module is tested and CE-marked.
- Can be used with external antenna or an onboard PCB Antenna.
